

**Campbell County Schools**  
**1<sup>st</sup> Nine Weeks at-a-Glance**  
**3rd Grade Math**

**Mathematical Practices:**

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

**Common Core Coding Explanation**

Domain:

- OA: Operations and Algebraic Thinking
- NBT: Number and Operations in Base Ten
- NF: Numbers and Operations in Fractions
- MD: Measurement and Data
- G: Geometry

| Common Core State Standard   | Aligned Textbook Lessons/Activities |
|--|-------------------------------------|
| <b>Place Value as it Relates to Addition and Subtraction – Suggested 12 Days</b>   |                                     |
| <p><b>3.NBT.A.1.</b> Use place value understanding to round whole numbers to the nearest 10 or 100.</p>  |                                     |
| <p><b>3.NBT.A.2.</b> Fluently add and subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction.</p>   |                                     |
| <p><b>3.OA.D.9.</b> Identify arithmetic patterns (including patterns in the addition table or multiplication table), and explain them using properties of operations. <i>For example, observe that 4 times a number is always even, and explain why 4 times a number can be decomposed into two equal addends.</i></p> |                                     |

## Foundations of Multiplication – Suggested 15 Days

**3.OA.C.7.** Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that  $8 \times 5 = 40$ , one knows  $40 \div 5 = 8$ ) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.

**3.OA.A.1.** Interpret products of whole numbers, e.g., interpret  $5 \times 7$  as the total number of objects in 5 groups of 7 objects each. *For example, describe a context in which a total number of objects can be expressed as  $5 \times 7$ .*

**3.NBT.A.3.** Multiply one-digit whole numbers by multiples of 10 in the range 10–90 (e.g.,  $9 \times 80$ ,  $5 \times 60$ ) using strategies based on place value and properties of operations.

## Developing Strategies of Multiplication – Suggested 10 Days

**3.OA.A.2.** Interpret whole-number quotients of whole numbers, e.g., interpret  $56 \div 8$  as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. *For example, describe a context in which a number of shares or a number of groups can be expressed as  $56 \div 8$ .*

**3.OA.B.5.** Apply properties of operations as strategies to multiply and divide.<sup>2</sup> *Examples: If 6*

|   |  |
|---|--|
| <p><math>\times 4 = 24</math> is known, then <math>4 \times 6 = 24</math> is also known. (Commutative property of multiplication.) <math>3 \times 5 \times 2</math> can be found by <math>3 \times 5 = 15</math>, then <math>15 \times 2 = 30</math>, or by <math>5 \times 2 = 10</math>, then <math>3 \times 10 = 30</math>. (Associative property of multiplication.) Knowing that <math>8 \times 5 = 40</math> and <math>8 \times 2 = 16</math>, one can find <math>8 \times 7</math> as <math>8 \times (5 + 2) = (8 \times 5) + (8 \times 2) = 40 + 16 = 56</math>. (Distributive property.) Students need not use formal terms for these properties.</p> |  |
|---|--|

**Exploring Inverse Relationships – Suggested 8 Days**

|   |  |
|---|--|
| <p><b>3.OA.B.6.</b> Understand division as an unknown-factor problem. <i>For example, find <math>32 \div 8</math> by finding the number that makes 32 when multiplied by 8.</i></p> |  |
|---|--|

|  |  |
|--|--|
| <p><b>3.OA.A.3.</b> Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.<sup>1</sup>See Glossary, Table 2.</p> |  |
|--|--|

|  |  |
|--|--|
| <p><b>3.OA.D.8.</b> Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.<sup>3</sup> This standard is limited to problems posed with whole numbers and having whole-number answers; students should know how to perform operations in the conventional order when there are no parentheses to specify a particular order.</p> |  |
